

NOVACLIN FRESH

Drycleaning detergent concentrate with innovative *FRESH-System* as well as marked antistatic and retexturing properties for use in perchloroethylene

Properties

NOVACLIN FRESH is a highly concentrated cationic drycleaning detergent with an innovative fragrance combination and deodorizing additives.

NOVACLIN FRESH is recommended for use in all perchloroethylene drycleaning machines.

NOVACLIN FRESH is a further development of our classic drycleaning detergent **NOVACLIN SUPER P**, maintaining at the same time the proved positive properties of the latter.

NOVACLIN FRESH has excellent drycleaning effects.

Coloured textiles receive defined colours, and the greying risk is minimized for whites.

The unique *FRESH-System* eliminates unpleasant odours remaining in the cleaned garments and provides them with a refreshing fragrance.

NOVACLIN FRESH has an excellent antistatic action, safely preventing the build-up of electrostatic charges and lint formation on the textiles during drying.

NOVACLIN FRESH produces a pleasant full garment handle. In drycleaning and drying cycles, the textiles remain almost free from creases.

NOVACLIN FRESH contains additives eliminating unpleasant odours in the drycleaning bath.

NOVACLIN FRESH does not create filter pressure and thus can be used in all filtration type systems.

NOVACLIN FRESH is particularly suitable for use in the well proved **PRECLIN P**-process and renders unequalled drycleaning effects.

Application

NOVACLIN FRESH is applied concentrated and suited for use in all dosing devices.

Basic concentration

Add to the freshly distilled drycleaning bath

1 to 2.5 ml of NOVACLIN FRESH per litre solvent

(bath + filter contents)

Addition

4 to 5 ml of NOVACLIN FRESH per kg textiles to be drycleaned

(approx. 0,5% of the machine load capacity)

Prespotting

For prespotting strongly soiled garments by spraying or prebrushing, we recommend our prespotting agents **POLYSOL RAN** and the famous **SEITZ - Spotting Kits**
